Work light on crane Option* Option Option
Work light on Fly-Jib Option Option Option*
Available radio remote controlled valve section fitted on the base Option* Option*
1 or 2 extra valves on Fly-Jib in hose reels Option Option

RCL 5300

The RCL 5300 monitors the load moment of the crane as well as the vehicle stability and the reby, the safety of the crane operator.

HMF InfoCentre

The HMF InfoCentre indicates the functional condition of the crane as well as the reasons for crane stops and errors. With EVS, the current stability of the vehicle is also indicated.

Radio remote control

HMF's radio remote control offers an efficient, precise, safe and labour-saving tool.

Continuous slewing area

With HMF's powerful continuous slewing system, the working area of the crane is 360° - without stop.

power to lift | 2 * Option for K2 - K8

EVS provides full Capacity right to the Limit - also in high Positions

The EVS stability safety system allows you to work with the crane to its maximum permissible lifting capacity - within the 360° movement, including over the driver's cab without the need to fully extend stabilizer beams.

The EVS system carries out active monitoring of vehicle stability in the entire 360° working area around the vehicle. The system includes all current conditions:

- The load on the vehicle
- The load moment of the crane
- The working speed
- The inclination of the ground
- The heel of the vehicle
 - everything.

HMF offers a series of personnel baskets also called MEWPs (Mobile Elevating Work Platform), covering every need and providing maximum safety for the personnel.

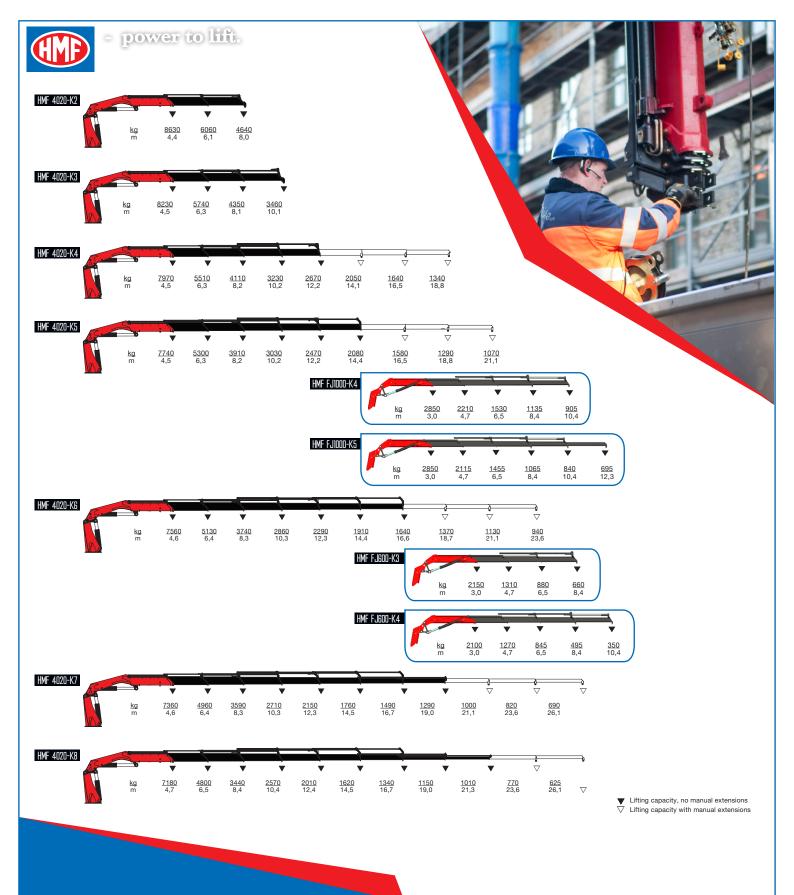

All HMF's personnel baskets comply with the strict rules for safety in the EN280 standard.

HMF provides different types of Fly-Jibs; It is possible to lead the winch via the Fly-Jib. HMF Fly-Jibs are available with extra valves, and this means that you can for example fit a grab on the Fly-Jib.

Minimum space requirements for the large crane range give you more space on the truck body - and better economy.

- power to lift
